

PRODUCT PROPERTIES

Designed to conform and stay on

Innovative Flex Technology allows Mepilex® Border Flex to move in every direction, reducing skin stress, increasing comfort¹⁻³ and keeping it in place.

Smart exudate management

The 5-layer dressing Absorbs, Channels and Traps exudate and allows you to Track progress. It also keeps exudate away from the wound bed, and preventing re-entry, even under compression*⁴.

Reduced pain and trauma

Our proven Safetac® technology means less pain and trauma to the skin⁵ during dressing changes, and reduced risk of maceration than traditional (adhesive) dressings^{6,7}.

UP TO **92%**

Superior flexibility compared to other foam dressings⁸

UP TO **125%**

Greater exudate handling capacity compared to other foam dressings⁹

93%

Of patients preferred dressings with Safetac® over other dressings⁵

*In vitro studies.

Introducing proprietary Flex Technology:
Unique conformability
360° flexibility

SMARTER ECONOMICS

Cost-effective wound care

Wound care makes up a significant portion of healthcare budgets. Only 14% of the overall cost is due to wound care products – the majority is driven by the provision of care for patients¹⁹. Unscheduled dressing changes require nurse time and resources. By reducing dressing changes, Mepilex® Border Flex can support undisturbed wound healing as well as a reduction in costs¹⁵.

Talk to us about how Mepilex® Border Flex can make a difference to your patients, team and budget.

Mepilex® Border Flex

A unique combination of Flex Technology and Safetac®

Wounds need to heal. Patients need care. Nurses need time. Budgets are tight. The challenge is finding a dressing that stays on as long as it is needed. Without compromise.

Mepilex® Border Flex combines innovative Flex Technology with our proven Safetac® technology to create a dressing that stays on and is still gentle.

Designed to conform and stay on

The story behind Flex Technology

Caring for patients with wounds can be difficult. Balancing efficient wound healing with patient’s needs used to involve compromise. Our new proprietary Flex Technology offers a win-win solution for both patients and care givers: creating a dressing that moves with the patient, stays on and helps improve their quality of life. Whether it’s leaving the dressing on in the shower, or simply forgetting it’s there altogether, Flex Technology’s got it covered.

Four steps to smart exudate management. Giving you the confidence to leave it on for longer.

1. Rapid absorption without swelling

The foam layer allows rapid absorption of both normal and viscous exudate^{10,11}. It is better at handling exudate than comparable dressings⁹, allowing you to leave it on for longer.

2. Exudate channelled to increase breathability

The layers of the dressing channel exudate away from the wound bed, and spread it over a wide surface area to increase moisture vapour loss. Minimal swelling¹². Maximum conformability⁸. Discrete profile.

3. Bacteria trapped away from the wound

The superabsorbent fibres in the retention layer prevent exudate containing bacteria from re-entering the wound bed, even under compression⁴, whilst the backing film prevents bacteria from getting in¹³.

4. Exudate tracked without dressing removal

The Exudate Progress Monitor allows the spread of exudate to be objectively assessed and recorded, without disturbing the wound¹⁴.

FROM 3 TO 7 DAYS Dressing change protocol

In a recent quality improvement project for patients with skin tears, Mepilex® Border Flex reduced the need for unscheduled dressing changes. Staying intact for an average of six days, it was found to have better absorbtion, better border adhesion and better patient comfort than the clinics previous dressing¹⁵.

Bacteria trapping in action: Mepilex® Border Flex releases up to 22 times less bacteria than other dressings*¹⁶

A
Mepilex® Border Flex after 1 hour of contact, number of bacterial colonies: between 0 and the low single digits^{17,18}.

B
Sorbact® Foam Gentle Border after 1 hour of contact, number of bacterial colonies: about 70 bacterial colonies¹⁷.

C
Cutimed® Siltec Sorbact® after 1 hour of contact, number of bacterial colonies: too numerous to count¹⁸.
